REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art made of record in the attached form PTO-892 considered to be pertinent to the submitted application.

Zimmermann et al. US # 6,695,747 disclose a transmission mechanism comprising a shifting device. The transmission mechanism includes a control device for controlling a transmission system with the shifting mechanism. Wherein a gear monitoring device monitors the deviation between the target position and actual position of the selector in the selection of rotational direction and monitors the selection motor current. The motor current controls a predetermined gear end position, (see col. 18, lines 61-67). During the engagement of a gear stage, an actual position of the selector motor or shift motor is detected. Due to the elasticity of the transmission passageway, it can appear that the actual position of the selector finger does not agree with the actual position determined by the position sensor. The deviation in the position between target value and actual value is determined, wherein the selection motor current is also monitored, (see col. 26, lines 6-16).

However, none of the prior art teaches or suggests claimed limitations in combination with:
